SOUTHWEST GEOPHYSICS MERGES WITH SCST TO ENHANCE AND COMPLEMENT SOLUTIONS

SAN DIEGO, April 24, 2018 / PRNewswire/ -- SCST, Inc. is excited to announce the merger with Southwest Geophysics, Inc.

Southwest Geophysics is a San Diego based firm specializing in geophysical data acquisition, processing, and interpretation. The firm has experienced accelerated growth over the past few years and will operate as a subsidiary of SCST. The merger presents both organizations the opportunity to expand geographically and strategically while simultaneously enhancing and complementing services already available to both client bases. "We are thrilled to welcome Southwest Geophysics into the SCST family. This merger will allow SCST to expand into new geographic areas and bring a specialized service to our existing and future clients," explained Neal Clements, CEO of SCST. "Their experience and reputation as an industry leader will continue to support our vision of providing the best technical solutions to the most challenging projects."

Established in 2004, Southwest Geophysics is comprised of skilled geophysicists providing state-of-the-art geophysical services; nondestructive

and relatively unobtrusive subsurface investigations. Their innovative and cost-effective methods help reduce explorative costs and assist in mitigating against unexpected site conditions. The use of geophysics provides pragmatic data relating to structural, geotechnical, geologic, and hydraulic conditions as well as subsurface infrastructure. "Southwest Geophysics is excited about the merger with SCST," says Hans van de Vrugt, Principal Geophysicist at Southwest Geophysics. "We have a long-standing relationship working together for many of the same clients. This merger will allow us to collaborate and continue to provide our expertise across a broader range of clients across the United States."
